

slime2

Library card sized full body tracker

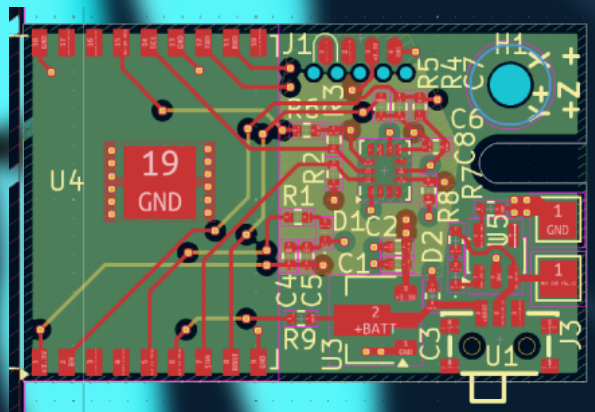

Larp on VRchat without the massive tracker bricks

A ESP8266 based SlimeVR tracker with all of the features of the much bigger and cumbersome official/DIY ones.

Charging module, switch, programming interface, mounting hole, it's all there. While the minimal footprint means a smaller battery area, it's still sufficient for multiple hours of play with the best SlimeVR IMU (ICM45686)
